

The [Platts 6th Annual European Power Summit](#) is an event for utilities, renewable energy companies and other key market stakeholders. The central discussion points focus on how to effectively tackle overcapacity, guarantee energy security, set tougher carbon-emission targets and make power greener

Topics of specific relevance to climate policy include:

- The key drivers of Europe's energy future
- Examining new targets for the EU to reduce carbon dioxide emissions, raise efficiency and deploy renewables by 2030 - have they gone far enough; will they deliver harmonization?
- Dissecting the ever increasing role of efficiency targets for utilities and possible new business models
- Market coupling and capacity mechanisms: Regional harmonization - governance of renewable support schemes - appropriate backup in the grid
- Smart grids and storage under the microscope
- Investigating the latest renewable energy developments

The conference also covers the specific perspectives of the European Commission, regulators, utilities, renewables industry, and consultancies.
